

OncoResponse

JOB TITLE: Director/Sr. Director of Translational Medicine

OncoResponse Inc. is a clinical stage, privately held immuno-oncology biotech company developing cancer immunotherapies using clues from the immune systems of elite cancer responders. In a broad strategic alliance with MD Anderson Cancer Center, OncoResponse deploys a proprietary B-cell discovery platform to identify and develop novel therapeutics targeting the tumor microenvironment. The company's lead candidate, OR2805, has entered clinical studies with a unique and transformative approach to the advancement of cancer therapeutics. Be part of an exciting discovery process in the fight against cancer. OncoResponse offers a team-oriented, stimulating work environment, along with competitive compensation, benefits and stock options. Join a small, growing company and make a big difference! Please visit www.oncoresponse.com.

Please note: We are following robust COVID infection prevention guidelines. All of our employees who work on site are required to present proof of full vaccination status (unless they have a medical or other legal exemption).

To apply, please email your resume and a cover letter to careers@oncoresponse.com.

OncoResponse seeks a **Director/Senior Director of Translational Medicine** to lead, formulate, and execute research programs and strategies for obtaining and analyzing patient-derived data from OncoResponse clinical studies, as well as to identify and initiate strategies for translational biomarker discovery and target validation. The successful candidate will report to the Chief Scientific Officer and work closely with the clinical and research teams to develop assays, analytical methods, and approaches for all candidate molecules through approval.

Responsibilities:

- Identify and develop strategies for translational biomarker discovery and validation through internal development and interactions with outside investigators;
- Develop and implement biomarker assays for patient and dose selection in clinical trials;
- Lead the design, analysis, and reporting of translational data, including IND-enabling data directly applicable to clinical studies, and data generated from clinical studies;
- Oversee day-to-day lab operations, collaborating with other research teams as needed to assist in their execution of experiments;
- Collaborate on the design and execution of key clinically enabling assays, including pharmacokinetic and pharmacodynamic assays for preclinical testing and clinical analysis;
- Support selection of CROs engaged in collecting and analyzing patient samples;
- Server on matrixed development teams representing the interests of translational medicine;
- Write reports summarizing experimental findings and present papers at internal and external meetings, and contribute to regulatory findings;
- Provide input and support for clinical research opportunities;
- Recruit, develop, and mentor staff to develop a robust and successful biomarker discovery and validation group as the company grows.

OncoResponse offers a diverse, inclusive environment, and is an equal opportunity employer. All qualified applicants will receive consideration for employment without regard to race, age, gender identity, sexual orientation, color, religion, sex, marital status, national origin, protected veteran status, disability status, or any other status protected by federal, state, or local laws. We are committed to growing a company of diverse, ethical, mission-driven people who respect and value each other's contribution and differences.

OncoResponse

JOB TITLE: Director/Sr. Director of Translational Medicine

Preferred Qualifications:

- An MD or PhD degree with experience in oncology, pathology, immunology, tumor immunology or related field with a minimum of 7 years of biopharmaceutical industry experience including a leadership role;
- Previous experience and successful track record of development and analysis of biomarker and related assays and techniques, such as flow cytometry, immunohistochemistry, and genomic analysis;
- Ability to develop and interpret assays to be used in clinical studies to evaluate immune responses both in the periphery and in tumors;
- Ability to collaborate in multifunctional teams with investigators, consultants, and scientists for assay development and interpretation;
- Experience in patient database searches and analysis for biomarker discovery and target validation;
- Strong organizational skills in experimental design, execution, and data reporting;
- Strong leadership, interpersonal and communication skills, with an enthusiasm for participating in a fast-paced environment characterized by rigorous science and innovative thinking.
